## ABSTRACT OF THE DISCLOSURE

This invention relates to compounds which are generally IP receptor antagonists and which are represented by Formula I:

$$G^1$$
  $O$   $N$   $G^2$ 

wherein  $G^1$  is selected from the group consisting of  $\underline{a}$ ,  $\underline{b}^1$ , and  $\underline{b}^2$ 

A and 
$$A \longrightarrow OCH_2$$
;  $\underline{\underline{a}}$   $\underline{\underline{b}}^2$ 

and A and G<sup>2</sup> are as defined in the specification; or individual isomers, racemic or non-racemic mixtures of isomers, or pharmaceutically acceptable salts or solvates thereof. The invention further relates to pharmaceutical compositions containing such compounds, methods for their use as therapeutic agents, and methods of preparation thereof.
